

Secured Access Control

Corporate Lobby Entry

RECOMMENDED PRODUCT FOR CORPORATE LOBBIES

OPTICAL TURNSTILES

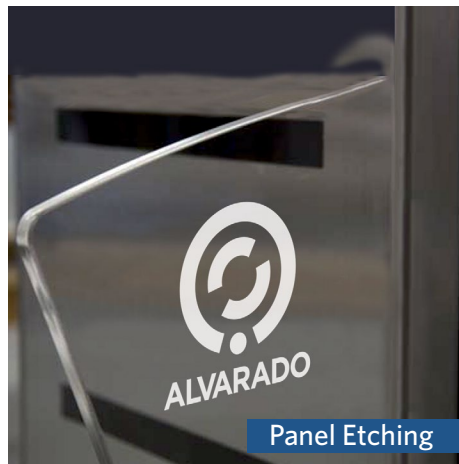

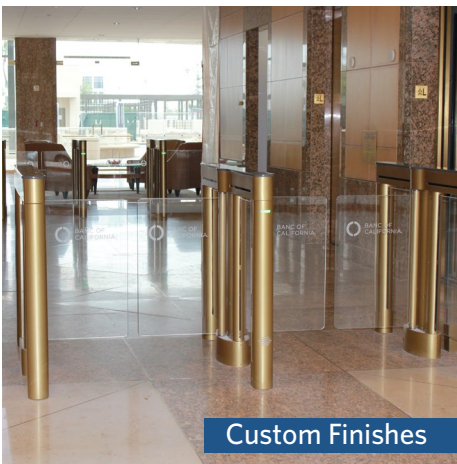

Alvarado optical turnstiles provide a superior combination of security, safety and aesthetics. Each model has been designed with the most discerning client in mind, with architecturally inspired features and materials that complement any lobby environment. With state-of-the-art optical technology in the industry's most modern cabinet designs, our turnstiles offer superior detection and rapid throughput in premium lobbies worldwide.

CUSTOMIZATION OPTIONS

With over a dozen customization options, Alvarado's optical turnstiles stand out in both form and function. Options vary by model and include:

- Alternate lid colors and materials
- Powder coated or plated cabinets
- Custom design or branding etching on panels
- Side panel illumination
- ADA widths
- Multiple barrier heights
- Floor saver platform
- Crawl over detection

FLEXIBILITY

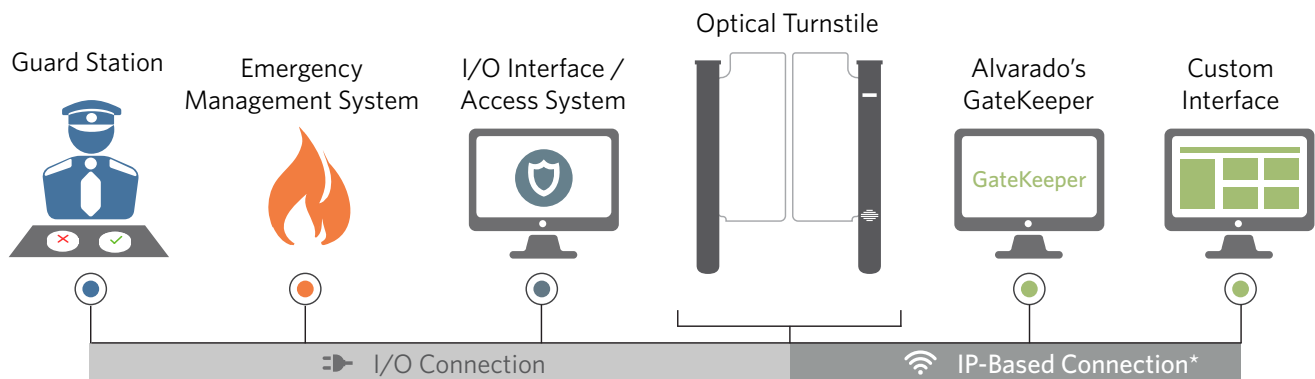

Alvarado's optical turnstiles can accept various credential readers, including RFID and emerging technologies such as biometrics and elevator dispatch. While most of these options can be custom fitted directly into the turnstile's lids, external mounting options are also available. Alvarado works closely with the decision makers to ensure that the aesthetics meet the needs of the project.

Corporate Lobby Applications

EASY INTEGRATION

Integrating Alvarado optical turnstiles into your lobby space is quick and easy. Our turnstiles integrate with virtually any existing access control or visitor management system. Dedicated inputs for fire or life safety systems are provided and outputs are available to turn on cameras, lock interior doors and provide remote notification of alarm events. The result is a secured access solution that not only looks amazing but provides superior access control and visitor management.

**IP-based gate control operates with Alvarado's Gatekeeper or with any interface.*

MAJOR BENEFITS OF ACCESS CONTROL TURNSTILES

IMPROVED SECURITY

Enhanced detection features recognize and notify of instances such as tailgating, loitering and forced passage. An unauthorized entry attempt will trigger an alarm, notify the user and alert the proper authorities of the conflict.

IMPROVED THROUGHPUT

When turnstiles are part of the entry process, visitors and employees present their valid credential directly to the turnstile to gain access. Reducing security guard involvement in the entry process speeds throughput and frees the guard or lobby staff to perform other duties.
